Integral Enterprise DataBridge

Reliable, Easy-to-Use Data Mapping Tool

Companies today face increased complexity in assimilating data from different areas of the enterprise. Integral Enterprise DataBridge (IEDB) addresses these challenges. IEDB locates, transforms, and integrates the various data sources that are required to give enterprise users access to real-time information.

Integral Enterprise DataBridge is being used by many SyteLine customers currently to automate on-going data transfer from online systems, such as storefronts and EDI tools.

Why are so many SyteLine users chosing IEDB?

- Simple, graphical interface
- Automated background processes need little to no monitoring
- Live, real-time, data integration
- Extremely reliable
- Low cost of ownership – easy-to-identify ROI

Integral Enterprise DataBridge is the ideal tool to perform:

- Integration between SyteLine and your eStorefront
- EDI data integration projects
- Data mapping services to and from any data source
    - Databases (natively supports Microsoft SQL server, Oracle, IBM DB2, My SQL and Progress RDBMS data sources)
    - Cloud - supports connectivity to Microsoft Azure
    - XML data
    - Flat files
    - EDI
    - Integral Enterprise Viewer Data – Use data from any ODBC compliant datsources
