Infor CloudSuite Industrial (SyteLine): An Experienced ERP System with Functionality Built for Electronics Manufacturers

Could your company use one of the leading mid-market ERP systems AND the specific functionality required by electronics manufacturers?

For years mid-sized manufacturers have had to choose between a robust, experienced ERP system and a system with the industry-specific functionality that they needed. Infor SyteLine ERP has a new answer to this problem. Infor CloudSuite Industrial (SyteLine), used by over 5,000 companies worldwide, now contains specializations specifically designed for the electronics industry.

1. Lot and Serial Number Control

CloudSuite Industrial's lot and serial number control includes many specific features. Most importantly, CloudSuite Industrial gives you true 'cradle-to-grave' tracking of all parts purchased, used in production, and sold. In addition, numbers can be pre-assigned prior to production and can be configured to contain intelligence.

2. Full-Featured Quality System

CloudSuite Industrial's Quality System is a complete quality system consisting of customer, vendor, and in-process modules. Track everything from customer complaints and corrective actions to vendor performance and inspections statistics.

3. Manufacturers Part Number

Effortlessly track manufacturer part numbers alongside your internal part numbers.

4. Consigned Inventory

Manage inventory consigned at a customer location and vendor inventory consigned at your location.

5. Customer and Vendor Portals

Powerful, configurable portals allow your customers and vendors to get the information they need when they need it.

Infor CloudSuite Industrial (SyteLine) has been helping manufacturers move forward since the 1980's, so the functionality listed above is only part of the rich set of features in the system. CloudSuite Industrial addresses everything from CRM and Estimating to Advanced Planning and Financial Management. Combined with a Microsoft platform that provides a powerful workflow engine, seamless integration to office applications, and online and mobile tools – we make sure users have the data they need, when they need it.

MOVING MANUFACTURERS FORWARD.
