Decision Navigator

Decision Navigator is an AI analytics platform for manufacturers. It combines curated ERP data, a semantic layer that defines your business terminology and metrics, and conversational AI to help you analyze data, build dashboards, and create data apps.

What you can do with Decision Navigator

Ask, explore, build, and share in one connected experience.

ASK
Conversational Data Analysis
Ask sophisticated, multi-step questions and get answers grounded in your business context.

EXPLORE
Interactive Workbooks
Every conversation is tied to a workbook, enabling you to explore the raw data and apply formulas, charts, & pivots.

BUILD
Dashboards & Data Apps
Describe the dashboard or app you want, and Navigator helps you build, refine, and style it.

SHARE
Publish & Monitor
Share results with your organization, get alerts when data changes, and give others view-only access.

How Decision Navigator works

Navigator prepares data from your ERP and other sources for AI, then applies your business definitions, metrics, and rules. AI agents use that context to connect information and deliver insights you can trace back to the underlying data.

DECISION NAVIGATOR PLATFORM

SOURCE
Your ERP
CSI / SyteLine

→

LAYER 1
Snowflake
Data is centralized & made AI-ready.

→

LAYER 2
Semantic Layer
Data is mapped to your terminology & metrics.

→

LAYER 3
Navigator AI
AI agents analyze your data & business context.

USE
Your team
See permission-governed insights.

Security and data privacy

Decision Navigator is designed to protect your data through multiple layers of security, including encryption in transit and at rest, secure authentication, role-based access controls, and separation of customer data. We use established cloud infrastructure and specialized service providers to support the platform, with access to customer data restricted to authorized users and services.

FAQs

ERP Supported	Infor CloudSuite Industrial / SyteLine V10 & V9.01+
Deployment	Cloud or on-premise
Customizations	Can ingest custom fields for analysis
Data Refresh	Data refreshes twice daily
Data History	Unlimited; no restrictions on amount of data
Implementation	Varies by requirements; typically 1-3 weeks
